SUMMARY

Fourth-year B.E. (AI & DS) student with a diverse technical skillset spanning full-stack web development and data analysis. Proficient in Python, MySQL, PostgreSQL, React.js, and Node.js, with a strong foundation in building responsive user interfaces using Bootstrap and custom CSS. Seeking a challenging internship to apply technical versatility and problem-solving ability to deliver high-quality software solutions.

SKILLS

Languages and Libraries: • Python • Pandas • NumPy • Matplotlib • Scikit-learn • OpenCV • JavaScript (ES6)
Frontend Technologies: • React • EJS • jQuery • Bootstrap • HTML5 • CSS3 • Next.js
Backend and Databases: • Node.js • Express.js • FastAPI • SQL • MySQL • PostgreSQL • RESTful API
Tools: • VS Code • Docker • Git • MySQL Workbench • PyCharm • Jupyter Notebook • pgAdmin • Docker

EDUCATION

Zeal College of Engineering & Research **2026**
B.E. (Artificial Intelligence & Data Science)
F.E.: 7.75 | S.E.: 6.73 | T.E.: 6.14 Aggregate: 6.87
SPVN, Shardanagar, Baramati **2022**
HSC — 67.53%
SPVN, Shardanagar, Baramati **2020**
SSC — 91.80%

CERTIFICATIONS

- Full Stack Web Development (Udemy) • SQL and PostgreSQL : The Developer's Guide (Udemy) • React : The Complete guide (Udemy)
- FastAPI-The complete guide (Udemy) • Docker and Kubernetes (Udemy)

PROJECTS

Secure Virtual ID System | React, Node.js/Express, PostgreSQL, Python/FastAPI

- Developed a full-stack biometric ID verification system with real-time liveness detection over WebSockets, streaming webcam frames to detect blinks (EAR algorithm) and prevent spoofing.
- Implemented face encoding matching using the face_recognition library to verify identity against stored user data.
- Built secure user flows with bcrypt password hashing, session-based authentication, OTP email verification (Nodemailer), and protected React routes.
- Integrated Cloudinary for photo storage and jsPDF + html2canvas for downloadable digital ID card generation.

GitHub: [suyashgardi/Face-Recognition-Based-ID-Registration-System](https://github.com/suyashgardi/Face-Recognition-Based-ID-Registration-System)

Smart Resume Parser | FastAPI, React.js, Python, NLP,

- Developed an AI-powered resume parsing system using FastAPI, Python, React.js, NLP, and Transformer models to automatically analyse PDF/DOCX resumes
- Extracts candidate details, technical skills, education, experience, projects, certifications, and languages from unstructured resume text.
- Implemented local NLP and semantic skill matching using Hugging Face Transformers and Sentence Transformers
- Built a REST API with in-memory resume processing and a React frontend for resume upload and structured candidate information visualization.

GitHub: [suyashgardi/smart-resume-parser](https://github.com/suyashgardi/smart-resume-parser)

Full-Stack Inventory Management System (Basic) | Express.js, MySQL, Fetch API

- Built a full-stack inventory system with an Express.js backend and a dynamic, no-reload frontend using the Fetch API.
- Designed a 4-table relational MySQL schema (Products, Suppliers, Purchases, Sales) with indexed foreign keys and cascade rules for automated data integrity.
- Implemented ACID-compliant transactions with row-level locking (FOR UPDATE) on purchase and sale endpoints to prevent race conditions under concurrent requests.
