SUMMARY

Final-year B.E. (AI & Data Science) student who has built 3 full-stack projects with public GitHub repositories, spanning biometric security, NLP-based resume parsing, and transactional inventory systems. Completed 5 Udemmy certifications in React, FastAPI, SQL/PostgreSQL, Docker & Kubernetes, and full-stack development. Seeking a software engineering internship to build reliable, secure web applications using Python, React, and Node.js.

SKILLS

Core: Python, JavaScript (ES6), SQL
Full-Stack Web: React, Next.js, Node.js, Express.js, FastAPI, RESTful APIs, WebSockets
Databases: PostgreSQL, MySQL (schema design, indexing, transactions)
Data & ML: Pandas, NumPy, Scikit-learn, OpenCV, Matplotlib, Hugging Face Transformers
Tools & DevOps: Git, Docker, Kubernetes (coursework), Jupyter Notebook, pgAdmin, MySQL Workbench, VS Code, PyCharm
Frontend: HTML5, CSS3, Bootstrap, jQuery, EJS

EXPERIENCE

Independent Full-Stack Developer *Personal & Academic Projects*

- Designed, built, and documented 3 end-to-end applications across 4 technology stacks (React, Node/Express, FastAPI, MySQL/PostgreSQL), each published on GitHub.
- Applied production practices across projects: password hashing, OTP verification, ACID transactions with row-level locking, and REST API design.

PROJECTS

Secure Virtual ID System *React, Node.js/Express, PostgreSQL, Python/FastAPI*

- Built a full-stack biometric ID verification system with real-time liveness detection: streamed webcam frames over WebSockets and used the EAR algorithm to detect blinks and block photo/replay spoofing.
- Matched face encodings (face_recognition) against stored user data to verify identity before ID issuance.
- Layered 4 security controls: bcrypt hashing, session-based authentication, OTP email verification (Nodemailer), and protected React routes.
- Integrated Cloudinary for photo storage and jsPDF + html2canvas for in-browser, downloadable digital ID cards. GitHub: [suyashgardi/Face-Recognition-Based-ID-Registration-System](https://github.com/suyashgardi/Face-Recognition-Based-ID-Registration-System)

Smart Resume Parser *FastAPI, React.js, Python, NLP*

- Built an AI-powered parser that analyses PDF and DOCX resumes and extracts 7 categories of structured data: candidate details, skills, education, experience, projects, certifications, and languages.
- Implemented local NLP and semantic skill matching with Hugging Face Transformers and Sentence Transformers, with no external API dependency.
- Delivered a REST API with in-memory processing (no resume files stored) and a React frontend for upload and visualization of results. GitHub: [suyashgardi/smart-resume-parser](https://github.com/suyashgardi/smart-resume-parser)

Full-Stack Inventory Management System *Express.js, MySQL, Fetch API*

- Designed a 4-table relational MySQL schema (Products, Suppliers, Purchases, Sales) with indexed foreign keys and cascade rules to enforce data integrity automatically.
- Implemented ACID-compliant transactions with row-level locking (FOR UPDATE) on both purchase and sale endpoints, preventing race conditions and overselling under concurrent requests.
- Built a no-reload dynamic frontend with the Fetch API. GitHub: [suyashgardi/Basic-Inventory-Management-System](https://github.com/suyashgardi/Basic-Inventory-Management-System)

EDUCATION

B.E. (Artificial Intelligence & Data Science), Zeal College of Engineering & Research *2026*
Aggregate: 6.87 (F.E.: 7.75 | S.E.: 6.73 | T.E.: 6.14)

HSC, SPVN, Shardanagar, Baramati *2022*
67.53%

SSC, SPVN, Shardanagar, Baramati *2020*
91.80%

CERTIFICATIONS (UDEMY)

Full Stack Web Development • SQL and PostgreSQL: The Developer's Guide • React: The Complete Guide • FastAPI: The Complete Guide • Docker and Kubernetes

LANGUAGES

English • Hindi • Marathi
